

INDOOR SOCCER DASHER BOARDS

The Dasher Board system by Soccer & Tennis Surfaces is custom designed and built to any size for your facility and is made of the highest quality materials to give you years of maintenance free usage.

Fabrication:

The dasher boards are a high density sports panel (55#/CF) with a thermally fused melamine surface to provide excellent play. The dasher boards are supported by 2" x 2" white powder coated steel posts every 4' for maximum strength. The steel posts are mounted into a floor sleeve in asphalt or concrete floor. An optimal surface mounted steel post can be used on a concrete floor.

Goals are typically 6-1/2' high, 12' wide, and 3' deep. However, other goal sizes of 7-1/2' x 14', or 8' x 14' used in various professional leagues, are available as well as an insert to convert back and forth. Goal nets are heavy-duty nylon, 1-3/4" mesh.

A **typical dasher board configuration** includes 10' high wall over and around the goal, 8' wall on the curves (radius) and 48" or 42" on straight-aways.

Entry doors can be installed at any desired position and are usually in the straight-away. They are made of a heavier density panel to insure years of usage with a chrome freezer handle hatching mechanism for durability and ease of use.

1/2" **tempered glass options** are available to portions of the dasher board system. This may be included on the radius, around the goals and on straight-aways to enhance viewing. This option also includes installing 1/2" full panels of tempered glass to the floor in lieu of the dasher board panel. Player boxes, penalty boxes and a referee box are all available options.

Netting:

Netting is an option for both around the field and over the field in 1-3/4" or 4" squares/openings.

Installation by an experienced STS crew takes approximately 5-7 days.
