FLOORING SURFACES, ACRYLIC PLEXIPAVE®

Installed over asphalt and suitable concrete, the Plexipave System is a durable, asbestos free and colorful playing surface for tennis courts, basketball, and multipurpose sports areas.

Using a series of 100% acrylic water vehicle coatings, Plexipave works well in all climatic conditions to protect asphalt from ultraviolet deterioration.

With two filler coats and two fortified Plexipave finish coats, the playing surface can be adjusted for play by varying the amount of sand content in the final coat. For greater comfort and ease of play, Plexicushion may also be added to provide a cushioned subsurface.

Certification is given that California Products Corporation is the manufacturer of this product.
